As a leading Professional Medical society, KSMO aims to provide the best treatment for Cancer patients. The Korean Society of Medical Oncology, KSMO was established in 2005, to perform multi-disciplinary, integrated treatment, and to implement academic activities in the field of Cancer.

The KSMO is a representative society in the field of clinical oncology in Korea. KSMO has been devoted to education and academic activities for expertise since it was established. KSMO provides forums for academic communication by holding regular meetings, education programs, reviewing the state-of-the-art and sharing the best research and treatment trends.

The KSMO has expended academic activities to the world by holding international conferences where global experts join in from 2019.

Korean Cancer Study Group (KCSG) is the nation’s leader in multi-institutional clinical trials for cancer treatment. Since establishment in 1998, KCSG has been dedicated to the advancement of clinical and cancer research through multi-institutional clinical trials in Korea. The KCSG was established as an institution where can conduct multi-center clinical trials in the Cancer field, led by researchers. KCSG has been devoted to develop new safe and effective cancer treatments through multi-center clinical trials, cooperate among members and improvement of related systems, ultimately contributes to improving public health by training professionals engaged in cancer clinical trials and delivering correct information on clinical trials to the public. And, differentiated education programs ranging from basic to detailed education by type of cancer are operated to train human resources in the field of cancer clinical trials. Various types of symposiums in 11 disease divisions, KCSG is moving toward freedom from cancer by sharing the latest knowledge in the field of oncology and academic exchange activities through questions and discussions from participants.
